

SALAR TAHERI

Senior Android & Mobile Systems Engineer

✉ salar.taheri.mirani@gmail.com [in linkedin.com/in/salar-taheri](https://www.linkedin.com/in/salar-taheri) github.com/salartaheri 📍 Tehran, Iran

Profile

Senior Android & Mobile Systems Engineer with over 10 years of software engineering experience specializing in Fintech, Android POS hardware integration, and high-scale enterprise applications. Demonstrated track record in developing secure payment SDKs, biometric eKYC pipelines serving **2.5M+ active users**, and real-time transaction processing compliant with national central banking standards (ISO 8583, Shaparak Kehroba contactless NFC). Proven mastery of modern Android architectures (Jetpack Compose, Kotlin Coroutines & Flow, Clean Architecture, Domain-Driven Design) combined with low-level peripheral communication (AIDL, serial/thermal printers, smart card readers, Java Card applets).

Work Experience

Senior Android Developer

Mar 2023 – Present

AvaParsi

- Architected and scaled an offline-first Android POS application for supermarkets and restaurants, utilizing **Room Persistence** and multi-tier local caching to manage large product catalogs with zero-latency lookups.
- Engineered **AmnPardaz Electronic Invoicing System** in **Flutter** enabling corporate merchants to submit cryptographically signed tax invoices directly to the national tax authority via smart POS terminals and Android smartphones (50k+ invoices submitted).
- Designed queue management and ticketing workflows by interfacing with weight scales, barcode scanners, and thermal receipt printers via **AIDL** and serial protocols.
- Led architectural refactoring toward **Domain-Driven Design (DDD)** and modular packaging, sustaining a **99.8% crash-free rate** across fragmented Android POS device vendors.

Android Developer (Fintech & POS)

Sep 2022 – Mar 2023

Omidpay

- Developed low-level banking transaction SDKs for Android smart POS terminals (Pax A920Pro, Amp8000), supporting magnetic stripe cards, smart IC cards, and secure PIN-pad interaction.
- Implemented strict **ISO 8583** protocol decoders/encoders, JPOS standards, and low-level asynchronous **TCP Socket** streaming, achieving **sub-200ms latency** for high-reliability interbank transaction clearance.
- Delivered the Android POS client for the **Nanino Smart Bakery Platform**, empowering thousands of bakeries across the country to execute government-subsidized bread transactions at massive scale (100k+ daily transactions with zero data loss).
- Hardened payment applications against tampering, reverse-engineering, and cryptographic injection, successfully passing national cybersecurity audits (**AFTA**).

Android Developer

Sep 2018 – Sep 2022

UID

- Engineered the core client SDK for Iran's premier digital identity verification platform, enabling automated liveness detection, AI-driven facial verification, and real-time video streaming over **WebSockets** and REST APIs for **2.5M+ active users** across major banks and brokerage firms (Sejam).
- Spearheaded legacy refactoring from Java/MVP to **Kotlin/MVVM**, reducing APK footprint by **35%** and drastically reducing external runtime dependencies.
- Configured custom **ProGuard/R8** obfuscation rules, anti-hooking detection, and Android Keystore payload encryption to protect biometric data in transit and at rest.

Android Developer (Freelance & Selected Projects)

2016 – Present

Independent & Client Systems

- **Android POS Banking & Kehroba System** (Sep 2024 – Mar 2025): Independently engineered an end-to-end banking application for smart POS terminals. Implemented ISO 8583 banking protocols, Java Card APDU smart card authorization, and Shaparak Kehroba contactless NFC payments.
- **Tonekabon Municipal Taxi System** (Softwaria): Built violation ticketing mobile client; designed an in-memory Canvas rendering engine streaming dynamic receipts as bitmaps over Bluetooth/Serial to **Bixelon thermal printers** (<800ms print latency).
- **Dolme Word Puzzle Game**: Published native Persian game on CafeBazaar; achieved smooth **60 FPS** gameplay by engineering custom Canvas Views and animation loops completely natively without external game engines (50k+ downloads, 4.7/5 rating).
- **LinuxNetwork.ir** (2025): Developed high-performance bilingual web toolbox (React, TypeScript, Tailwind CSS) for Linux kernel tuning (`sysctl`, BBR TCP congestion), WireGuard VPN configurations, and CIDR subnet calculation (100/100 Lighthouse score, Cloudflare Pages edge delivery, thousands of monthly DevOps visitors).
- **Vira Document Image Processing Service** (2025): Engineered an intelligent client-side document photo standardization web platform using HTML5 Canvas and WebAssembly (<50ms in-browser latency); processed **20,000+ applicant photos**, slashing rejection rate from 18% to **<0.2%**.

Technical Skills

- **Languages**: Kotlin, Java, Dart, SQL, Bash
- **Android Core & UI**: Jetpack Compose, Android SDK, View System & 2D Canvas, AIDL, Navigation Component, Material Design 3, CameraX, Host Card Emulation (HCE)
- **Architecture & Concurrency**: Clean Architecture, Domain-Driven Design (DDD), MVVM, MVI, Multi-Module Gradle, Kotlin Coroutines, Kotlin Flows, RxJava, Thread Pooling
- **Fintech & Hardware**: ISO 8583, JPOS, Shaparak Kehroba (NFC Contactless), Java Card (Applets), APDU Protocol, Pax & Amp POS SDKs, ESC/POS Thermal Printers, Serial/Bluetooth SPP, Smart Card Readers, PIN-pad Integration
- **Networking & Data**: Ktor Client, Retrofit, OkHttp, WebSockets, TCP Sockets, REST APIs, Protobuf, Room Database, SQLite, DataStore, Hilt, Koin
- **Security, DevOps & Tools**: ProGuard/R8, Android Keystore, Anti-Tamper/Root Detection, Git, Linux, Docker, CI/CD, Sentry

Education

Bachelor of Science in Software Engineering

2013 – 2018

University of Guilan, Iran

Certifications & Compliance

- **National Cybersecurity Compliance (AFTA)**: Certified secure payment application development and anti-tamper hardening for banking POS terminals.
- **Central Banking Payment Standards**: Verified implementation of Shaparak Kehroba contactless NFC payment protocol and ISO 8583 banking switch integrations.
