📍 Tehran, Iran (Open to Relocation) salartaheri.dev

Professional Summary

Senior Android & Mobile Systems Engineer with over 10 years of production engineering experience specializing in Fintech, Android POS hardware integration, and high-scale enterprise applications. Demonstrated track record in developing secure payment SDKs, biometric eKYC pipelines serving **2.5M+ active users**, and real-time transaction processing compliant with national central banking standards (ISO 8583, Shaparak Kehroba contactless NFC). Proven mastery of modern Android architectures (Jetpack Compose, Kotlin Coroutines & Flow, Clean Architecture, Domain-Driven Design) combined with low-level peripheral communication (AIDL, serial/thermal printers, smart card readers, Java Card applets).

10+ Years

Technical Skills

- **Languages:** Kotlin, Java, Dart, SQL, Bash
- **Android Core & UI:** Jetpack Compose, Android SDK, View System & 2D Canvas, AIDL, Navigation Component, Material Design 3, CameraX, Host Card Emulation (HCE)
- **Architecture & Concurrency:** Clean Architecture, Domain-Driven Design (DDD), MVVM, MVI, Multi-Module Gradle, Kotlin Coroutines, Kotlin Flows, RxJava, Thread Pooling
- **Fintech & Hardware:** ISO 8583, JPOS, Shaparak Kehroba (NFC Contactless), Java Card (Applets), APDU Protocol, Pax & Amp POS SDKs, ESC/POS Thermal Printers, Serial/Bluetooth SPP, Smart Card Readers, PIN-pad Integration
- **Networking & Data:** Ktor Client, Retrofit, OkHttp, WebSockets, TCP Sockets, REST APIs, Protobuf, Room Database, SQLite, DataStore, Hilt, Koin
- **Security, DevOps & Tools:** ProGuard/R8, Android Keystore, Anti-Tamper/Root Detection, Git, Linux, Docker, CI/CD, Sentry

Professional Experience

Senior Android Developer

Mar 2023 – Present

AvaParsi

- Architected and scaled an offline-first Android POS application for supermarkets and restaurants, utilizing **Room Persistence** and multi-tier local caching to manage large product catalogs with zero-latency lookups.
- Engineered **Amn Pardaz Electronic Invoicing System** in **Flutter**, enabling corporate merchants to submit cryptographically signed tax invoices to the national tax authority via smart POS terminals and smartphones (**50k+ invoices** submitted with 100% acceptance).
- Designed queue management and ticketing workflows by interfacing with weight scales, barcode scanners, and thermal receipt printers via **AIDL** and serial protocols.
- Led architectural refactoring toward **Domain-Driven Design (DDD)** and modular packaging, sustaining a **99.8% crash-free rate** across fragmented Android POS device vendors.

Android Developer (Fintech & POS)

Sep 2022 – Mar 2023

Omidpay

- Developed low-level banking transaction SDKs for Android smart POS terminals (Pax A920Pro, Amp8000), supporting magnetic stripe cards, smart IC cards, and secure PIN-pad interaction.
- Implemented strict **ISO 8583** protocol decoders/encoders, JPOS standards, and asynchronous **TCP Socket** streaming, achieving **sub-200ms latency** for high-reliability interbank transaction clearance.
- Delivered the Android POS client for the **Nanino Smart Bakery Platform**, empowering thousands of bakeries to execute government-subsidized transactions at scale (**100k+ daily transactions**, zero data loss).
- Hardened payment applications against tampering and reverse-engineering, successfully passing national cybersecurity audits (**AFTA**).

Android Developer

Sep 2018 – Sep 2022

UID

- Engineered the core client SDK for Iran's premier digital identity verification platform, enabling automated liveness detection, AI-driven facial verification, and real-time video streaming over **WebSockets** for **2.5M+ active users** across major banks and brokerage firms (Sejam).
- Spearheaded legacy refactoring from Java/MVP to **Kotlin/MVVM**, reducing APK footprint by **35%** and drastically cutting external runtime dependencies.
- Configured custom **ProGuard/R8** obfuscation rules, anti-hooking detection, and Android Keystore payload encryption to protect biometric data in transit and at rest.

Android Developer

2016 – 2018

Freelance (Softwaria / Varna Marlik)

- Built the **Tonekabon Municipal Taxi System**: in-memory Canvas rendering engine streaming dynamic receipts as bitmaps over Bluetooth/Serial to Bixolon thermal printers (**<800ms** print latency, 100% field adoption).

- Designed and shipped **Dolme** — a native Persian puzzle game on CafeBazaar with **60 FPS** gameplay via custom Canvas Views and animation loops without external game engines (50k+ downloads, 4.7/5 rating).
- Built and deployed on-demand food ordering, classifieds, and developer utility applications for client businesses.

Key Projects

Android POS Banking & Kehroba Contactless System

Sep 2024 – Mar 2025

Independently engineered a full-featured banking application for smart POS terminals. Implemented ISO 8583 binary protocol over raw TCP sockets, Java Card APDU smart card authorization, and Shaparak Kehroba contactless NFC payments via Host Card Emulation (HCE). Achieved **sub-200ms transaction latency** and **100% central banking compliance**.

LinuxNetwork.ir — Linux Network & Kernel Tuning Toolbox

2025

High-performance bilingual web toolbox (React, TypeScript, Tailwind CSS) for Linux kernel tuning (`sysctl`, BBR TCP congestion), WireGuard VPN configuration, and CIDR subnet calculation. **100/100 Lighthouse score**, sub-100ms edge delivery via Cloudflare Pages, thousands of monthly DevOps visitors.

Vira — Smart Document Image Processing Service

2025

Intelligent client-side document photo standardization platform using HTML5 Canvas. Processed **20,000+ applicant photos** for educational institutions, reducing rejection rate from 18% to **<0.2%** (<50ms in-browser latency, zero server upload).

Education

Bachelor of Science in Software Engineering

2013 – 2018

University of Guilan, Iran

Certifications & Compliance

- **National Cybersecurity Compliance (AFTA):** Certified secure payment application development and anti-tamper hardening for banking POS terminals.
- **Central Banking Payment Standards:** Verified implementation of Shaparak Kehroba contactless NFC payment protocol and ISO 8583 banking switch integrations.
